Company Profile

Shandong Taishan Ruibao Composites Co., Ltd.(brand Pardus) is located in Leling High-tech Development Zone, Shandong Province, and is a wholly owned subsidiary of Taishan Sports Industry Group as is Taishan Sport United States. Ruibao (Pardus Cycle) has more than 80 Research and Development employees, and more than 200 pieces of test equipment. Our bike production line was imported from Germany, Japan, and Taiwan. Working symbiotically with our human resources, we use digital and intelligent automated systems and robotic arms.

We introduced the most advanced one-piece carbon fiber bicycle production technology to build PARDUS carbon fiber bicycle – Team bike for the Chinese Olympic Mountain Bike Team at the 2016 Rio Olympics and winner of the 2011 Mountain Bike Championships.

Our “World in Heart” philosophy embraces not just professional bicycle racers, but recreational riders, healthy living and environmentally conscious manufacturing practices. Pardus may make the stem, fork, bar, or frame you ride on right now, and we do it in with hybrid carbon, bio friendly resin, and business standards that leave a small carbon tread (footprint) on the earth.

Made in China has become “Created in China” as Taishan continues to refine, improve, and perfect carbon manufacturing techniques. Our five year new bike facility improves upon older frame and component making procedures. Taishan Sports partners with Shandong University Equipment Research and Development Center, East China University of Science and Technology’s New Material Research and Development Center in order to develop our extensive line of sporting goods and bicycles.

Visit our booth #12259 to discuss your whole bike or component production needs.
