### HTI Plastics adds New Injection-Molding Press

*Lincoln, NE* – HTI Plastics, a leader in injection-molded plastic products, has added a new Sodick 60-ton press to its already impressive collection of injection-molding presses. The new Sodick press was added only a few months following the addition of two other new Sodick presses. HTI installed two new Sodick presses, at 40 ton and 100 ton back in June. The new press will be used to expand the company’s services in a variety of areas benefiting of HTI customers.

“We’re growing with our existing customers and adding the new presses will help to accommodate their needs, the needs of our other customers, as well as the needs of future customers,” said Troy Just, President of HTI Plastics. “We need to prepare for growth in the years to come, and investing in equipment and our facility will provide us with additional capacity and enhanced capabilities to handle that growth and provide for our customers well into the future.”

With the addition of the new press along with the two new presses added in June, HTI now has injection-molding presses ranging in size from 40 tons to 1,800 tons. Giving them the capability to serve a wide variety of markets and industries. HTI is invested in continually improving all areas of its business to help ensure the success of their customers.
