

## Mack's® Live Fire™ Electronic Shooting Earmuffs

Mack's® is showcasing their LiveFire™ Electronic Shooting Earmuffs, which are great for hunting, skeet and trap, target shooting, tactical training, motor sports and loud events. These affordably priced earmuffs pack features typically reserved for much higher priced earmuffs.

The LiveFire™ earmuffs feature Double Action™ Technology, offering the dual benefits of hearing enhancement and hearing protection.

The hearing enhancement feature is provided by 4 high fidelity microphones that amplify sound up to 8 times while providing adjustable frequency tuning. The multi-directional microphones (2 on each side) have wind-resistant covers, which help ensure clarity of sound. The adjustable frequency tuning allows the user to set bass and treble levels to fit individual sound preferences.

The hearing protection feature is provided by Full Auto™ noise compression, which protects hearing from the harmful noise of gunfire. The amplification feature shuts down when harmful noise is detected, and the earmuffs protect hearing with a 25 decibel noise reduction rating.

LiveFire™ electronic earmuffs are powered by Duracell® batteries and are available in black and camo designs. They are lightweight and very comfortable to wear due to the adjustable, padded headband and soft, cushioned ear cups.
