

Jaeger-Unitek Promotes Phelan to Market Manager, Recreational Vehicles

Monday, January 21, 2019

Jaeger-Unitek Sealing Solutions announced that Colton Phelan has been promoted to Market Manager, Recreational Vehicles. Phelan will lead all activities in developing new sealing solutions to serve Jaeger-Unitek's RV customers.

Phelan will work closely with strategic RV customers and Jaeger-Unitek's engineering organization to identify and create innovative sealing systems. Previously, Phelan led all automotive customer, application and market activities for Jaeger-Unitek utilizing both

rubber and engineered thermoplastic extrusion and molding technologies. This included the creation of sealing systems which not only provided outstanding protection against water and temperature intrusion into vehicle interiors, but also, the reduction of structure-borne vibrations to deliver reduced interior noise levels and fatigue on mating components from over the road travel.

"Creating highly engineered sealing solutions on world class automotive vehicles has been a core competency for our team", President, Kevin Casey commented. "With the rapid growth and use of our Patented Flip 'N Seal® Slide-Out Sealing System in the RV market, combined with our RV customer's desire to apply the latest state-of-the-art sealing technologies, Colton is a natural to lead our team".

"Serving our RV customers is a great opportunity to help create products which specify the highest performing polymers in the market using innovative, multi-functional geometries", added Phelan. "Our customers continue to incorporate the use of our Flip 'N Seal® Slide-Out seals, which are a perfect example of how our engineering team utilizes proven automotive polymers that provide outstanding sealing and durability performance. We are very excited to help our customers with new solutions and will feature our technologies at The RVX Experience in Salt Lake City in March".
