FOR IMMEDIATE RELEASE

Suburban Redesigns Range Product Offering to Satisfy the Design and Cost Needs for Every Application

DAYTON, Tenn. - Suburban, a division of Airxcel, Inc., proudly introduces an enhanced line of range offerings merging elegant design, exceptional performance and with multiple design options.

“The kitchen is a focal point in any household or RV. It is where people congregate, relax and even create,” said Art Klee, President of Suburban Manufacturing. “We’ve redesigned our new ranges to deliver the perfect mixture of options and aesthetics to meet the galley designer’s goals and cost points. We have multiple options for each range component and have added new component options to provide over 3,000 possible combinations of the ranges we provide” added Klee.

“We’ve developed a new sleek family of products aimed at every price point for every RV application, stated Jeff Cowan, National OEM Sales Manager for Suburban Manufacturing, “moreover, our models can be customized to the specific tastes of the product designers,” said Cowan. He went on to say “Optional backlit knobs and oven lights are available on all models, so whether the market needs a conventional 17” black range with piezo and wire grates or our ultra-modern 22” stainless steel range with a glass door with stainless steel trim, deluxe grates and stainless steel radius handle, Suburban has the product that meets their needs. This allows the OEM to have a cooking appliance at the correct cost point for each model and help differentiate the galley of each product line. These new cooking products will be available the first of April.”

Located in Dayton Tennessee, Suburban pioneered space saving gas heating systems, water heaters and cooking appliances and has grown to become a leading designer and marketer of gas appliances to the RV Industry. Suburban’s dedication to safety, quality, on time delivery and design has earned them a reputation for delivering some of the most dependable gas appliances for RV’s for over 50 years.
